

Exercise 02

- Solve the graph traversal problems for the below undirected graph using C/C++.

- Problem
 - 1) Print the graph representation through an adjacency matrix.
 - 2) Implement the breath-first search algorithm and show the result starting at node 5.
 - 3) Implement the depth-first search algorithm and show the result starting at node 5.
- Your answer should be completed based on the source code provided in the lecture.
